Summary:

This class is the introduction to the study of research methods of political science. The course has two main goals. First, it is a broader introduction to the key debates within the philosophy of science literature. In other words, how do we learn about a subject and how do we know that we learned something. These are questions that are not specific to any sub-field in political science nor even to political science but are vital to any endeavor that claims to be scientific.

The second goal of the course is more practical and that is to introduce the basic methods used in political science. There are numerous methods used and as such this course only provides a broad overview of the various approaches and discusses the benefits and costs of each approach. In addition, the course will provide an overview of how one designs and implements a research project starting from the research question to the completed manuscript.

Brief Overview of Requirements:

Attendance and Participation: 20% of final grade.

Research questions: 5% of final grade

Research pages: 10% of final grade

Literature reviews: 15%

Final Paper Assignment: 25% of final grade.

Final Exam: 25% of final grade.

Reading assignments

Many of the readings for this course come from the books. Significant portions of the readings, however, come from articles that you will need to acquire. For each week the assignments are listed in a specific order meant to demonstrate the development of the literature. Please read them in the order that they are listed.

Required Books:

Chalmers, A.F. 1976. *What is this thing called Science? 4th Edition*. Cambridge: Hackett Publishing Company.

Grading System:

Attendance and Participation (20%): Attendance and participation account for 20% of your final grade. It is vitally important for you to come to class prepared, i.e. having carefully read the assignments. Simply showing up for class is not sufficient. You will need to consistently contribute to class discussion in order to satisfy the participation aspect of this part of your grade.

Paper Assignment (65% of total grade): During the semester you will be required to write **two** 10-15 literature reviews. This is the equivalent of a research article but without the actual data analysis. As a way to prepare for the final paper, there are a series of additional graded assignments that lead up to the final paper.

Research question (10%): This is a set of 20 research questions (if-then statements about a particular topic). Your final paper topic will come from one of these questions, so be sure to cover a large set of potentially interesting topics.

Research pages (15%): You will take 10 of the research questions and expand them into a single page (single spaced). The research page essentially expands on the question and both highlights the question/puzzle that is to be answered as well as how you will answer it.

Literature review (30%- 15% for each review): You will take 2 of the topics in the research pages and expand them into a full literature review. This is a 10-15 page examination of the previous literature on the topic that both covers what has been done but also shows why there is a question to be answered. These are meant to be comprehensive reviews, so the expectation is to have 30+ articles/books in the review.

Final Exam (25%): At the end of the semester you will be given a final exam. The final exam will contain a set of open ended questions that mainly test basic issues in philosophy of science but there will also be part of the exam that examines the different research methodologies.
